

Alan Andres Haro

AI Security Controls Engineer · Securing AI/ML Systems, Pipelines & Agents

Utah, USA · (385) 505-2608 · hello@aharo.dev · aharo.dev · linkedin.com/in/hvaandres · github.com/hvaandres

SUMMARY

Security engineer with **10+ years** securing cloud platforms — and, increasingly, the AI and ML systems built on them. Designs and operates **security controls for AI workloads** across Azure, AWS, and GCP: hardening model and agent deployments, securing MLOps and data pipelines, and enforcing IAM, data governance, and guardrails so teams adopt AI safely. At Intermountain Health, partners with **10,000+ developers** to ship AI and ML services securely in a HIPAA/HITRUST environment. Combines deep DevSecOps practice — **IAM, detection, adversarial testing, and policy-as-code** — with hands-on experience deploying and protecting AI agents, LLM-adjacent workloads, and the data that feeds them.

CORE COMPETENCIES

AI / ML Security Controls

Model & agent deployment hardening, MLOps pipeline & supply-chain security, guardrails & safety controls for AI agents and APIs, prompt-injection & model-abuse mitigation, AI red-teaming & adversarial testing

Data Security & Governance

Training-data governance & classification, data-pipeline security, encryption, Postgres, Elastic, BigQuery

Cloud & Platform

Azure (AKS, Policy), AWS, GCP, Kubernetes, Terraform, Ansible, FluxCD, ArgoCD, Cloudflare, CI/CD, Python

Identity & Access

IAM, RBAC, PAM, MFA, least-privilege access for AI systems & data, secrets management, machine & workload identity (PKI)

Detection & Monitoring

Microsoft Sentinel & Defender, Wiz, SIEM / SOAR / EDR / XDR, Datadog, Splunk, threat hunting, anomaly detection, incident response

Governance & Compliance

NIST (incl. AI RMF), ISO 27001, SOC 2, HIPAA / HITRUST, secure SDLC, policy as code

EXPERIENCE

Senior Data & Cybersecurity Engineer, Team Lead

Oct 2024 – Present

Intermountain Health

- Partner with **10,000+ developers** shipping AI agents and ML workloads, embedding security controls — IAM, guardrails, and policy-as-code — directly into self-service pipelines so teams adopt AI safely in a **HIPAA/HITRUST** environment.
- Built a reusable "vending machine" Terraform module library that bakes **least-privilege IAM, RBAC/MFA, and Azure Policy guardrails** into every AI/ML and infrastructure deployment by default.
- Automated IAM lifecycle and least-privilege access for AI systems and the sensitive data that feeds them; enforced **Azure Policy as code** across all cloud resources.
- Centralized logging, metrics, and detection across cloud and AI/ML workloads — improving threat detection, anomaly monitoring, and incident response.
- Re-architected connectivity with Cloudflare and Tunnels (**saving thousands**) and automated scale across **200+ AKS clusters** hosting containerized services and model workloads.

Senior DevOps & DevSecOps Engineer

May 2023 – Oct 2024

TherapyNotes

- Designed and secured cloud-native data pipelines feeding analytics, security monitoring, and AI-adjacent workloads.
- Governed data services (Postgres, Elastic, BigQuery) for security, integrity, and reliability — the trustworthy foundation for AI/ML data.
- Built monitoring and alerting (Datadog, Prometheus) for data freshness, pipeline integrity, and anomalous behavior across production systems.

EXPERIENCE / continued

Senior Security Software Engineer, Team Lead

Jul 2022 – Aug 2023

Lumifi Cyber

- Engineered secure SDLC and DevSecOps pipelines (SAST, DAST, dependency scanning) — supply-chain controls directly applicable to ML model and dependency risk.
- Led penetration testing and API security assessments, identifying high-impact vulnerabilities and driving remediation — adversarial-testing practice transferable to AI/LLM red-teaming.
- Deployed SOC 2-aligned cloud services in Azure and enforced security policies aligned with NIST and ISO 27001 frameworks.

DevOps Engineer Mentor

May 2022 – Oct 2025

Nucamp · Part-time

- Mentored students in DevOps and secure cloud practices — Python, containerization with Kubernetes, and AWS/Azure/GCP.
- Taught Infrastructure as Code best practices and CI/CD pipeline implementation for secure, scalable cloud environments.

Technical Support Engineer

May 2020 – May 2022

DigiCert

- Guided enterprise customers through certificate and key deployment across Linux, macOS, and Windows — TLS, SSL, PKI, IoT, and code signing (machine-identity fundamentals for securing services).
- Ran manual and automated testing across CertCentral and DigiCert tooling; resolved complex, high-pressure customer issues.

Software Engineer

Jan 2019 – May 2020

Utah Valley University

- Developed APIs integrating multiple platforms to streamline internal resources.
- Supported QA automation, testing internal systems to identify vulnerabilities and design effective fixes.

Technical Support Engineer

Nov 2017 – Jan 2019

Instructure

- Supported instructors, administrators, and students troubleshooting the Canvas LMS, ensuring fast, accurate resolution of platform issues.
- Built internal automation with Python and Selenium to reproduce issues, validate fixes, and reduce resolution time.

EDUCATION

M.S. Cybersecurity

Utah Valley University · Graduated

B.S. Web & App Development

Utah Valley University · Graduated

A.S. Technology Management

Utah Valley University · Graduated

IT & Cybersecurity Certificates

Google & CodePath

PROJECTS

- Azure-Terraform

▸ DevOps — AWS IaC

▸ PCAP File Scanner

▸ TodoList — K8s Deployment

▸ SOPS-Flux Playground

▸ Send-Messages Automation

▸ Starving — iOS App

▸ Android Projects
